PROFESSIONAL SUMMARY

Aspiring Cybersecurity professional and 7th-semester student with a dedicated focus on Offensive Security and Ethical Hacking. I have developed a strong technical foundation through academic projects and hands-on practice in controlled lab environments (TryHackMe/Virtual Labs). Proficient in the basics of the penetration testing lifecycle, including reconnaissance and vulnerability identification using tools like Nmap and Burp Suite. I am a quick learner with a hacker's mindset, currently seeking an internship or entry-level role to transition my foundational skills into professional experience and contribute to proactive security defense..

EDUCATION

Bachelor of Science — Cyber Security

Riphah International University, Islamabad (I-14) | 2023 – 2027 (Expected)

TECHNICAL SKILLS

Security Tools & Platforms

- Penetration Testing: Kali Linux, Metasploit Framework, Burp Suite, Nmap
- Network Analysis: Wireshark, Cisco Packet Tracer
- Digital Forensics: Autopsy, memory image analysis, file carving & recovery
- Endpoint & Threat Management: IDS/IPS, firewall configuration, vulnerability assessment

Programming Languages

- C++ · Python · Java · HTML/CSS

Operating Systems & Infrastructure

- Linux (Kali) · Windows Server · Networking (TCP/IP, CCNA-level) · Cisco IOS

PROJECTS

Universal File Recovery Tool

Digital Forensics Project | Academic Project

- Developed a comprehensive forensic file recovery tool supporting USB drives, SSDs, SD cards, and HDDs.
- Implemented direct device-level scanning and recovery from memory dump (.mem) files.
- Supports live recovery from connected devices, automating forensic triage workflows.
- Technologies: Python, file system parsing, raw disk I/O, forensic analysis techniques.

Smart Vulnerability Assessment System (SVAS)

Network Security Project | Academic Project

- Built an intelligent vulnerability scanner that identifies, scores, and prioritizes security weaknesses.
- Integrates Nmap for network/IP scanning and extends CVSS scoring with actionable remediation guidance.
- Provides criticality ratings and mitigation recommendations per discovered vulnerability.
- Technologies: Python, Nmap, CVSS scoring, network enumeration.

ChatNet – End-to-End Encrypted Chat System

Application Security Project | Academic Project

- Designed a secure instant-messaging platform with bcrypt-hashed passwords and encrypted message payloads.
- Implemented multi-layer authentication using user credentials plus encrypted passcodes.

- Architecture mirrors secure communication principles used in modern messaging applications.
- Technologies: Java, bcrypt, symmetric encryption, socket programming.

Parallel Password Cracker

Parallel & Distributed Computing Project | Academic Project

- Engineered a multi-threaded brute-force password cracker demonstrating PDC concepts in a security context.
- Utilized SHA-256 hashing for password comparison with parallelized thread execution for performance.
- Demonstrates deep understanding of cryptographic weaknesses and the need for strong password policies.
- Technologies: Python, multi-threading, SHA-256, PDC principles.

Secure Election Management System

Cryptography & Secure Systems Project | Academic Project

- Built a transparent and tamper-resistant election platform incorporating multiple layered security controls.
- Implemented voter authentication, audit logging, and integrity verification mechanisms.
- Technologies: Python, cryptographic protocols, secure database design, access control.

CERTIFICATIONS & COURSES — CISCO NETWORKING ACADEMY / IBM

Security & Ethical Hacking

- Ethical Hacker · Apr 2025
- Cyber Threat Management · May 2026
- Industrial Cybersecurity Essentials · May 2026
- Network Defense · Apr 2025
- Endpoint Security · Nov 2024

Networking & Infrastructure

- CCNA: Introduction to Networks · Dec 2024
- Network Support and Security · Nov 2025
- Networking Devices and Initial Configuration · Oct 2024
- Operating Systems Basics · Apr 2025
- Linux Essentials · Nov 2025

Programming & AI

- Python Essentials 1 & 2 · May 2026
- C++ Essentials 2 (Partner: CPA - Programming Essentials in C++) · May 2024
- AI Fundamentals with IBM SkillsBuild · May 2026

ACHIEVEMENTS & ACTIVITIES

- CTF Competitions : Competed in multiple Capture The Flag cybersecurity challenges, demonstrating practical offensive and defensive skills
- Cisco Networking Academy : Completed 10+ professional courses covering ethical hacking, networking, Linux, and AI
- IBM SkillsBuild : Completed AI Fundamentals certification, expanding knowledge in AI-driven security applications
